FAIZAN HASHIM

Utilities & Maintenance Manager | Energy Management | Process Optimization | Water & Steam Systems Expert
Contact# +92-332-3224626 | E-mail: hashimfaizan93@gmail.com

PROFESSIONAL SUMMARY

I am a seasoned engineering professional with +10 years' experience in utility operations, energy management, and process optimization across high-capacity manufacturing and power plants. My career is defined by the multiple successful projects that have potential to save **7 Million PKR/month**. Selected for a prestigious 6-month technical training at Chongxin Power Plant, China, gaining hands-on expertise in boiler operations, maintenance, troubleshooting, and P&ID interpretation. Proven track record in implementing ISO 50001 energy management systems, leading energy efficiency and sustainability projects, and optimizing utility systems to reduce costs and enhance operational reliability. Strong leader with expertise in team management, project execution, and cross-functional coordination.

EDUCATION

- MBA | June -19 to Mar -21 | Supply Chain Management | Iqra University, Pakistan

- BE | Jan-12 to Mar-16 | Polymer & Petrochemical Engineering |NED University of Engineering & Technology

TECHNICAL TRAINING IN CHINA | Oct 2016 – Apr 2017

Chongxin Power Plant – China (Power China Gansu Plant)

- Completed 6-month onsite technical training at a 1320 MW coal-fired Gansu Power Plant.
- Gained hands-on experience in boiler operations, maintenance, and troubleshooting.
- Studied and interpreted Piping & Instrumentation Diagrams (P&IDs) for various coal power plant processes.

PROFESSIONAL EXPERIENCE

Digital Apparel (Pvt) Limited | Oct 2022 - Present

Manager Utilities

- Lead utilities and maintenance operations across DAL Units 1–4, ensuring uninterrupted plant performance and compliance with SEQS, BEQS, and EMS standards.
- Manage and optimize critical utilities including dual-fuel boilers, RO plant, ETP (100,000 imp. gallons/day), compressors (75 KW Compair), and gensets to ensure cost-effective and efficient operations.
- Direct the operation of water treatment and effluent recycling systems, ensuring sustainable discharge in line with environmental regulations.
- Conduct costing, forecasting, and feasibility analysis for projects, applying technical and performance-based evaluations to select efficient equipment and investments.
- Develop and implement strategies to reduce utility costs, enhance energy efficiency, and encourage renewable energy adoption to minimize carbon footprint.
- Ensure compliance through timely submission of monitoring reports and permits while maintaining strong relationships with contractors and service providers.

Projects & Achievements

- Awarded Active Participant of EnMS Program by UNIDO for commitment to energy performance and

sustainable initiatives.

- Installed and commissioned multiple machines including Makina scrapping machines, Nexia washers, Rotondi dryers, Ecotex washers and Yilamk rainforest washers.
- Executed grid-tied solar projects (275 KW & 144 KW), enhancing renewable energy utilization and reducing operational costs.
- Designed and commissioned a 75 KW VSD Compair compressor system with air dryer and ventilation.
- Successfully completed and energized 11 KV load extension project.
- Commissioning of 500 KVA oil immersed step down transformer (11Kv/0.4KV) along with 630A MV panels.
- Installation & commissioning of 825KVA (APD825C) Cummins DG Set.
- Led energy-saving projects across four units, achieving PKR 7 million/month savings through steam piping modifications.
- Delivered a sustainable garments drying system, saving PKR 4 million/month and reducing carbon emissions by ~140 tCO_2/month.
- Planning and execution of Effluent treatment plant extension from 100,000 IG to 250,000 IG.
- Optimized condensate recovery tanks with automation, generating PKR 0.5 million/month savings.

Shafi Gluco Chem (Pvt) Limited | July 2019 – Oct 2022

Senior Utility Engineer

- Directed utility operations of two high-capacity production units (120 & 80 tons/day), ensuring uninterrupted supply of raw/process water, cooling water, compressed air, and steam.
- Oversaw complete operation and maintenance of advanced utility systems including 15TPH chain grate coal boilers, multiple fire tube boilers (Loos 6TPH, Nova Sigma 8TPH, Bosch 8TPH, Razzaq 8TPH), RO plants (432,000 GPD & 92,000 GPD), cooling towers, and compressors.
- Ensured compliance with corporate policies, cGMP, EHS standards, and regulatory requirements while coordinating effectively with QA teams during audits.
- Implemented preventive and corrective maintenance schedules, minimizing downtime and extending equipment lifecycle.
- Led utility teams and labor workforce, providing technical troubleshooting, cost control, and process optimization support.
- Performed costing, monitoring, and analysis of utility consumption, introducing efficiency measures that reduced operational expenses and improved sustainability.
- Spearheaded projects focused on energy optimization, waste recovery, and environmental sustainability to align with long-term corporate objectives.

Projects & Achievements

- Successfully installed, erected, and commissioned a 15TPH coal-fired chain grate boiler.
- Designed a condensate recovery system, generating annual savings of PKR 10 million.
- Recycled RO backwash water, achieving 90% recovery 475,200 gallons/month and saved PKR150K/month.
- Implemented ENMS ISO 50001 energy management system to enhance energy performance.
- Installed and commissioned 20 m^3/hr RO plant and two 55KW Fusheng screw compressors.
- Redesigned septic tanks and introduced a single-vessel chemical cleaning setup for RO plant to reduce downtime.
- Applied coagulation and flocculation methods to treat high turbidity water for improved process reliability.

- Recovered heat from boiler blowdown to preheat boiler feed water, reducing energy demand.
- Designed condensate recovery tanks to lower steam consumption in deaerators.
- Innovated steeping water reuse through aeration, supporting water conservation initiatives.

Power China Gansu Energy Investment & Co. Ltd. (CPEC's Power Project) | May 2017 – June 2019
Operation Engineer – Water Treatment Department

- Operated water treatment systems for two 660MW supercritical coal-fired boilers, ensuring reliable boiler feed water supply.
- Managed seawater intake, sedimentation, ultrafiltration, SWRO, BWRO, demineralization, EDI, sodium hypochlorite, hydrogen production, and wastewater treatment units.
- Monitored plant operations via Distributed Control System (DCS), ensuring compliance with SOPs, safety standards, and performance requirements.
- Executed startup, shutdown, and normal operations of water treatment systems with high efficiency.
- Performed alkali/acidic CIP for SWRO and BWRO systems and optimized sedimentation and dosing processes.
- Conducted water quality testing (SDI, pH, alkalinity, chloride, turbidity, silica, etc.) to maintain boiler feed water standards.
- Supported maintenance teams through system isolation, bypass, and safety clearances under permit-to-work procedures.
- Supervised teams during flushing, chemical cleaning, commissioning, and reinstallation of systems.
- Maintained daily logs, conducted inspections, and resolved plant issues to minimize downtime.

Ismail Industries Limited – Astro Pack (Pvt.) Ltd. | Mar 2016 – Sep 2016
Trainee Engineer

- Assisted in operations of 3-layer and 5-layer Cast Polypropylene (CPP) film plant (Gruppo Colines – Italy) with 5,000 tons' annual capacity.
- Monitored and optimized production parameters to meet product specifications.
- Supported process operations, including additive optimization for quality improvement.
- Prepared documentation for monthly and annual quality and compliance audits.
- Coordinated labor workforce based on production schedules.

CORE TECHNICAL SKILLS

- Utility Operations & Maintenance, Boilers (Chain Grate, Fire Tube, Loos, Nova Sigma, Bosch, Razzaq), Compressors, Cooling Towers, RO Plants, Steam & Condensate Systems
- Water Treatment & Desalination, SWRO, BWRO, Demineralization, EDI, Sedimentation, Ultrafiltration, Chemical Cleaning (CIP)
- Energy Management, ENMS ISO 50001 Implementation, Energy Saving Projects, Solar Power Systems (Grid-Tied, Elevated & PEB Mounting)
- Process Optimization, Cost Reduction, Heat Recovery Systems, Waste Recycling & Reuse, Efficiency Improvements
- Design & Commissioning, Piping Design, Machinery Installation & Commissioning, Utility System Modifications
- Engineering Software, Aspen HYSYS, Edraw Max (Piping Design), ROSA (Reverse Osmosis System Analysis)
